### Enterprise Virtual Array 3000

The Enterprise Virtual Array 3000 (EVA3000) is the mid-range member of the HP StorageWorks virtual disk array enabled by VersaStor technology. The EVA3000 is designed for the data center where there is a critical need for ever-increasing capacity/replication requirements, performance demands and business continuance needs. Support is provided for HP StorageWorks Continuous Access, HP StorageWorks Business Copy, and HP OpenView Storage Operations Management Software. The EVA3000 is a full 2-Gb end-to-end Fibre Channel Array, which operates in 1-Gb, 2-Gb or mixed 1-Gb/2-Gb SAN fabrics. The EVA3000 is available in one of four integrated "independent bundle" configurations, which includes one pair of HSV100 controllers, two FC drive enclosures and 8 to 16 FC hard drives (bundle dependent). For ordering information and configuration rules, refer to the EVA3000 QuickSpecs at: [http://h18000.www1.hp.com/products/quickspecs/11619\\_div/11619\\_div.HTML](http://h18000.www1.hp.com/products/quickspecs/11619_div/11619_div.HTML)

### HVD to LVD Converters

HVD (High Voltage Differential) adapters and LVD (Low Voltage Differential) devices are normally incompatible due to their different signaling voltage levels. This incompatibility does not allow direct communication between the different technologies. The HVD to LVD converter allows connectivity between legacy HVD Host Bust Adapters and today's LVD devices. The converter provides:

- Connectivity in direct attach or shared configurations of all currently available LVD devices, including disks, tapes, libraries and shelves (4314 or 4354) when used with the KZPBA-CB and 3X-KZPBA-CC HVD adapters. With the retirement of StorageWorks 1 disks and HVD shelves (BA36R), converters are desirable where upgrades to LVD HBAs, or upgrades to current operating system versions are not possible.

Shared and direct attach configurations are interconnected much the same as those previously configured with homogeneous HVD solutions, except that the HVD output is now passed through the converter before proceeding to the LVD device.

HVD to LVD one-port rackmount converter (see QuickSpecs for configuration details)

3X-DWZCV-BA

HVD to LVD two-port rackmount converter (see QuickSpecs for configuration details)

3X-DWZCV-CA

- Storage controllers require Tru64 UNIX V4.0F or OpenVMS V7.1-2
- PCI controllers/adapters use one PCI slot
